Supplemental Information
Book Value Per Share Inclusive of Common Dividends & Reconciliation of Non-GAAP Financial Measures

Management believes Book Value Per Share Inclusive of Common Dividends provides investors with useful supplemental information because it reflects both changes in GAAP book value per share and cash dividends distributed to common shareholders. Management uses this measure as an additional indicator of per-share capital generation and capital return. Because dividends paid to common shareholders reduce GAAP book value per share, management believes this measure helps investors evaluate the combined effect of retained capital growth and capital distributed to shareholders during the period.
